1 Introduction

The **tikzDevice** package allows for graphics output in native \LaTeX format. That is, the output of the `tikz()` function can be directly included in \LaTeX documents by way of and `\input{}` statement. For example, in R

```
require(tikzDevice)
tikz('simpleEx.tex',width=3.5,height=3.5)
plot(1)
dev.off()
```

And then in a \LaTeX document

```
\documentclass{article}
\usepackage{tikz}
\begin{document}
  \begin{figure}[!h]
    \centering
    \input{simpleEx.tex}
    \caption{Simple Example}
  \end{figure}
\end{document}
```

And you get

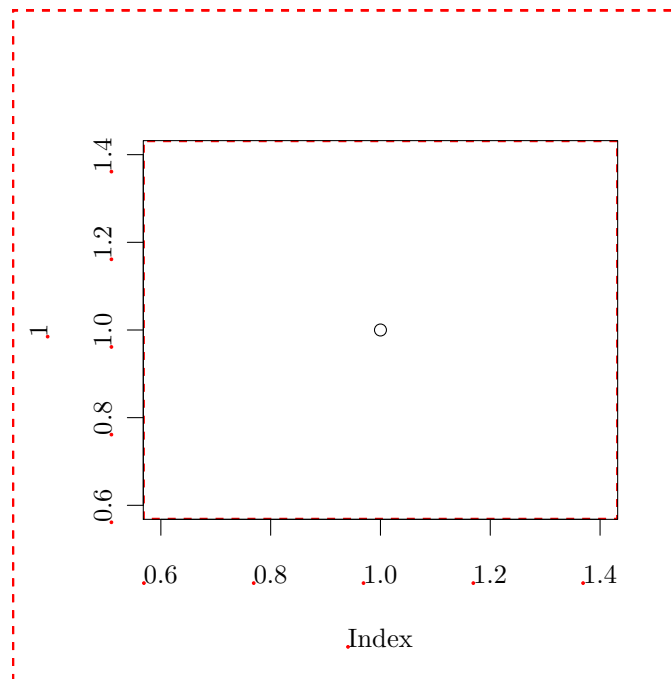

Figure 1: Simple Example

2 Background

About TikZ, the PicTeX device and the story of two fortran programmers with a dream.
